

# SAT-SA SUPERVISORY ASSESSMENT REPORT

SUPERVISORY ANALYTICS TOOL FOR SOC ASSESSMENT (NTRO / NCIIPC) — PROTOTYPE

|                                      |                                                           |
|--------------------------------------|-----------------------------------------------------------|
| Report ID: RPT-CSE-001-6BD9A9        | Classification: SAT-SA — Supervisory Assessment Prototype |
| Entity/CSE: Entity CSE-001 (CSE-001) | Sector: General                                           |
| Assessment Period: 2026-Q4           | Generated At: 2026-10-08T10:24:55 UTC                     |
| Source Submission: soc_alerts.csv    | Source Hash: 8163c5de503857a3...                          |

## 1. Executive Summary

Supervisory evaluation for Entity CSE-001 (CSE-001) analyzed 1200 alert records, 0 case records, and 0 infrastructure assets. The analytics engine identified 1 supervisory finding(s), of which 1 are categorized as High/Critical severity. Overall Assessment Validity is rated as LOW, reflecting current submission coverage and observable process stages. Major observable evidence limitations include: Case Management Records (ITSM/SOAR), Asset Inventory Telemetry Baseline. Human examiner adjudication status: 0 confirmed, 0 modified, 0 rejected, 0 pending additional evidence requests, and 1 open for examination. AI outputs remain strictly advisory; supervisory decisions reflect human examiner determination.

*Advisory Notice: AI agent recommendations are strictly advisory. Final supervisory judgement remains with the human examiner.*

| Ingested Alerts | Ingested Cases | Ingested Assets | Findings Flagged | Assessment Validity |
|-----------------|----------------|-----------------|------------------|---------------------|
| 1200            | 0              | 0               | 1                | LOW                 |

## 2. Operational Capability Assessment (8 PS Dimensions)

Evaluation of eight operational capabilities based strictly on submitted evidence and process observability:

| Operational Capability | Status                | Findings | Validity | Adjudication State    |
|------------------------|-----------------------|----------|----------|-----------------------|
| Threat Detection       | NO OBSERVED CONCERN   | 0        | LOW      | N/A (No Findings)     |
| Investigation          | OBSERVED CONCERN      | 1        | LOW      | 1 Open / Under Review |
| Escalation             | INSUFFICIENT EVIDENCE | 0        | LOW      | N/A (No Findings)     |
| Incident Response      | INSUFFICIENT EVIDENCE | 0        | LOW      | N/A (No Findings)     |
| Security Operations    | NO OBSERVED CONCERN   | 0        | LOW      | N/A (No Findings)     |
| Governance & Oversight | OBSERVED CONCERN      | 1        | LOW      | 1 Open / Under Review |
| Operational Discipline | NO OBSERVED CONCERN   | 0        | LOW      | N/A (No Findings)     |
| Cyber Resilience       | INSUFFICIENT EVIDENCE | 0        | LOW      | N/A (No Findings)     |

## 3. Key Supervisory Findings & Examiner Adjudication

Detailed examination of flagged operational conditions, evidence citations, AI advisory inputs, and human examiner decisions:

Finding 1: Absence of Formal Case Records for Priority Alerts (ID: NS-CSE-001-ALERTS-NOCASE)

|                                                                                                                                                                                                                   |                |                   |               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|-------------------|---------------|
| Category: negative_space                                                                                                                                                                                          | Severity: HIGH | Confidence: 89.0% | Validity: LOW |
| Observed Facts: Evidence gap detected: no formal investigation or case record was observed for 344 High/Critical alert(s) in the submitted telemetry.                                                             |                |                   |               |
| Supervisory Rationale: Operational compliance requires priority detections to possess linked investigation case files. This observed absence indicates potential telemetry ingestion gaps or unformalized triage. |                |                   |               |
| AI Advisory Review: N/A                                                                                                                                                                                           |                |                   |               |
| Human Decision: OPEN   Adjudicated By: Unadjudicated   Notes: None                                                                                                                                                |                |                   |               |

4. Assessment Assurance & Evidence Validity Matrix

Assessment Validity is determined as **LOW**. Assessment validity is LOW. Significant evidence gaps, contradictions, or unobserved process stages preclude extrapolating findings to broader supervisory conclusions without supplementary verification.

| Assurance Dimension | Status    | Observation                                                                                | Implication                                                             |
|---------------------|-----------|--------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|
| Temporal            | AVAILABLE | Observable telemetry spans 14.1 days (2026-01-01 to 2026-01-15).                           | Observable telemetry supports baseline supervisory evaluation.          |
| Severity            | FULL      | Multi-tier severity coverage represented across 4 severity tiers (121 Critical, 223 High). | Observable telemetry supports baseline supervisory evaluation.          |
| Asset               | UNKNOWN   | No asset inventory records available in submitted dataset.                                 | Evidence gaps or unobserved process stages limit supervisory assurance. |
| Process             | LOW       | Low process coverage: Evidence only observable for Detection stage.                        | Evidence gaps or unobserved process stages limit supervisory assurance. |

5. Evidence Limitations Breakdown

Missing Evidence:

- **Case Management Records (ITSM/SOAR):** Zero formal case investigation or ticket records were observable in submission. *(Downstream investigation and escalation compliance cannot be verified from alert telemetry alone.)*
- **Asset Inventory Telemetry Baseline:** No asset inventory submitted to cross-reference alert sources. *(Asset criticality and coverage cannot be independently substantiated.)*

Unknown Denominators:

- **Asset:** ()

6. Formal Evidence Requests & Provenance Registry

No active evidence requests recorded.

7. Traceability Verification

All 1 findings in this report maintain cryptographic provenance linking each observed rule to source telemetry records in DatasetUpload '5b45bbe5-8d72-4b42-9860-d7c484b86f5c', immutable AssessmentAssurance profile, local AI audit logs, and human adjudication records. Generated via SAT-SA Offline Supervisory Engine.
